

Problem Solving in Diabetes

The evidence base in diabetes is accumulating rapidly. Prevalence of diabetes is increasing globally, and it is increasingly managed by multi-disciplinary teams working across primary and secondary care. Health professionals working in diabetes need to keep up to date with recent developments. There has also been a boom in both the primary and secondary literature of diabetes. Textbooks and monographs abound which summarize the classic characteristics of the typical diabetes patient. Meanwhile the doctor treating individuals needs current information to enable him/ her to solve real life and everyday problems in the field. Problem Solving in Diabetes does just that. The authors have drawn on their clinical experience backed up by wide critical reading in the current primary literature to identify 50 problems and their solutions. Each case covers presentation, options, and an evidence-based management plan. This book will be an invaluable reference source to doctors in their everyday practice dealing with the specific problems of individual patients.
